Research Interest

My research goal is to develop powerful generative AI (Gen AI) solutions applicable across various domains, creating a strong Gen AI+X framework. I am currently focused on creating specialized methodologies to adapt large-scale foundational Gen AI models in fields such as media, art, health-care, manufacturing, and logistics, although my scope is not limited to these areas. I am also interested in exploring the societal implications of Gen AIs and developing ways to mitigate potential negative impacts that may arise from the development of Gen AI.
